

Product portfolio CENTRIFUGAL PUMPS

Small centrifugal pumps with mechanical seal or magnetic coupling

Universally deployable regenerative turbine pumps suitable for many industrial applications

speck | 

Side channel pumps with NPSH suction stage

Particularly suitable for media close to the boiling point and volatile media

speck | 

Centrifugal pumps DIN 24255 | EN 733

Universally applicable water pumps for clean or slightly soiled liquids with low viscosity

Magnetic drive chemical process pumps EN 22858 | ISO 2858

Sealless magnetic coupling pumps made of stainless steel are ideal for the highest requirements

Heat transfer pumps

Pumps with uncooled mechanical seal or magnetic coupling, as radial impeller or peripheral impeller for heat transfer or cooling technology

speck | 

Stainless steel standard pumps EN733

Reliable, single-stage electric centrifugal pumps in AxTop design, reliable and with high quality

Product portfolio CENTRIFUGAL PUMPS

Slurry pumps

Single-stage, horizontal sludge centrifugal pumps, for industrial use e.g. for erosive waste water and abrasive sludge

Magnetically coupled plastic pumps

For the leak-free pumping of toxic, dangerous, valuable media or media that crystallize in contact with the atmosphere

Vertical multistage centrifugal pumps

Low energy consumption, wide variety of connections available and easy maintenance

Hygienic centrifugal pumps

Stainless steel pumps appropriate for applications requiring a high level of hygiene, suitable in the food- and pharmaceutical industries

Self-priming waste water pumps

Used in building, agricultural, treatment and industrial applications. Ideal for handling liquids with suspended solids. Self-priming to 7,5m.

Submersible pumps

For use in industrial, communal and private applications, suitable for pumping clean or heavily soiled media
